Abstract

There are various kinds of procedures described for endoscopic thyroidectomy. Until now, more than 20 procedures have been carried out. Recently, transoral endoscopic thyroidectomy vestibular approach (TOETVA), also called as scarless thyroidectomy, is the procedure that has proven its efficacy. TOETVA is a thyroidectomy procedure where we use three incisions and trocars through the oral vestibulum and proceed under the guidance of a 30° endoscope. Herein, we aimed to present and include all technical steps of TOETVA with a short video.

Key words: TOETVA, scarless thyroidectomy, minimally invasive thyroid surgery,
